

# **Germany Fiscal Element** JSON Specification

#### Precautions

- Unauthorized duplication, copying, reproduction, or modification of any part or all of this document is strictly prohibited.
- Contents of this manual are subject to change without prior notice. Contact us directly for the most recent information.
- Every effort is made to ensure that the contents of this manual are without error. Please contact us if any errors or other issues are found.
- The previous statement notwithstanding, we will not be liable for any negative impact as a result of use.
- Epson shall not be liable for any damages caused as a result of using this product incorrectly, failing to comply with the content of this document, or having repair or modifications performed by third parties other than Epson or those specified by Epson.
- Epson shall not be liable for any issues as a result of installing optional parts or consumables that are not genuine Epson parts or parts certified by Epson.

#### Trademarks

EPSON, EXCEED YOUR VISION, and ESC/POS are registered trademarks of Seiko Epson Corporation.

#### **ESC/POS® Command System**

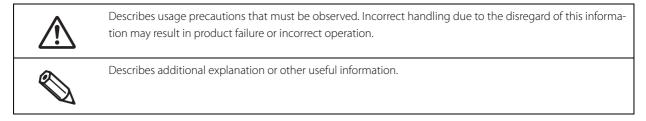

Epson has embarked on a global initiative by developing ESC/POS, a unique POS printer command system. ESC/ POS contains a wealth of unique commands, many of which are patent-protected. Our system enables the configuration of versatile POS systems with a high level of scalability. In addition to being compatible with most Epson POS printers and displays, the flexibility provided by this unique control system facilitates ease of future upgrades. This functionality and convenience of use are appreciated around the world.

# **Safety Precautions**

### **Meaning of Symbols**

The following symbols are used in this manual. Make sure to understand the meaning of these symbols before using the product.

# **Usage Limitations**

Please use our products in environments and systems designed with consideration to safety and disaster recovery such as fail-safe configurations and redundant designs, for example, if this product is used in applications in which a high level of reliability and safety in functionality and precision is required such as in aircraft, trains, ships, automobiles and other transportation-related applications or in crime prevention equipment and safety equipment.

This product is not intended for use in applications that require extremely high levels of reliability and safety such as in aerospace equipment, trunk-line communications equipment, nuclear power control equipment, and medical equipment. Consider your usage environment and requirements carefully before using this product in such applications.

# **About this Manual**

### **Purpose of this Manual**

This document describes JSON specifications for developers who develop an application using GermanyFiscalElement of Epson ePOS SDK.

#### **Organization of this Manual**

This manual is organized into the following chapters.

- Chapter 1 Common Specifications
- Chapter 2 Functional specifications
- Chapter 3 Error Code List

- □ Escape character: "/" "\" "b" "f" "n" "r" "t" "uXXXX" => Escape with "/ (backslash)"

# **Data type definition**

| Data Type      | Description                                                      |  |
|----------------|------------------------------------------------------------------|--|
| string <n></n> | String of up to n characters                                     |  |
|                | ASCII characters (0x20 to 0x7E)                                  |  |
| string<[n]>    | String of n characters                                           |  |
|                | ASCII characters (0x20 to 0x7E)                                  |  |
| DateTime       | • UTC                                                            |  |
|                | Format: YYYY-MM-DDThh:mm:ssZ(ISO8601)                            |  |
| number         | Number (valid only in decimal notation)                          |  |
| base64 string  | Binary data represented as base64 encoding string                |  |
| boolean        | Boolean value (true or false)                                    |  |
| array          | Character string represented as an array (string enclosed in []) |  |

# JSON message template

[Request]

```
{
    "storage":{
        "type":"[storage type]",
        "vendor":"[vendor name]"
    }
    "function":"[requested function]",
    "input":{
        "Item1":"[input parameter1]",
        "Item2":"[input parameter2]",
        .....
    },
    "compress":{
        "required":true/false,

# **Functional specifications**

# Configuration

#### SetUp

Sets up German fiscal element (TSE)

- C Sets PUK, AdminPIN, and TimeAdminPIN in German fiscal element (TSE)
- Internally executes German fiscal element (TSE) unlock (see UnlockTSE), enables export after a CSP test failure in German fiscal element (TSE) (see EnableExportIfCspTestFails), and runs German fiscal element (TSE) selftest.
- Initializes German fiscal element (TSE) and makes it ready to use
- □ As this procedure may require a maximum of 60 seconds for processing, set the timeout periods shown below to 120 seconds.
  - Timeout period for operate API of Epson ePOS SDK
  - Timeout period for <type>operate</type> in StorageMessage of ePOS-Device XML

#### Role

#### -

#### Parameters

| Name         | Туре        | Description                                |
|--------------|-------------|--------------------------------------------|
| puk          | string<[6]> | New PUK to be set                          |
| adminPIN     | string<[5]> | New PIN to be set for Admin privileges     |
| timeAdminPin | string<[5]> | New PIN to be set for TimeAdmin privileges |

### SetUpForPrinter

Start-up after replacing printer

- D Must be executed whenever the combination of German fiscal element (TSE) and printer is changed
- **I** Internally registers the printer serial number as a client ID in German fiscal element (TSE).
- □ Internally runs German fiscal element (TSE) self-test.

[Cautions for SetUp/SetUpForPrinter/RunTSESelfTest]

- □ As this procedure may require a maximum of 60 seconds for processing, set the timeout periods shown below to 120 seconds.
  - Timeout period for operate API of Epson ePOS SDK
  - Timeout period for <type>operate</type> in StorageMessage of ePOS-Device XML

#### Role

#### RunTSESelfTest

Runs a self-test of the German fiscal element (TSE).

□ After each power-on, the self-test of German fiscal element (TSE) is necessary before running the other control command for the German fiscal element (TSE).

The self-test checks to see if the internal module of the German fiscal element (TSE) works properly.

 The printer automatically runs the self-test of German fiscal element (TSE) after each power-on, so basically, the user does not need to run the self-test manually.
 However, if the printer is used for 25 hours or longer without being turned off, the user needs to run the self-

test using this function before the time for continuous run of the printer reaches 25 hours.

- □ To acquire the remaining time before the self-test is required, use "timeUntilNextSelfTest" of GetStorageInfo. [Cautions for SetUp/SetUpForPrinter/RunTSESelfTest]
- □ As this procedure may require a maximum of 60 seconds for processing, set the timeout periods shown below to 120 seconds.
  - Timeout period for operate API of Epson ePOS SDK
  - Timeout period for <type>operate</type> in StorageMessage of ePOS-Device XML

Role

-

## RegisterSecretKey

Registers the secret key

- **D** Registers the key used to calculate the hash value required for user/host authentication when logging in.
- □ This setting is persisted across power cycles.

#### Role

Admin

#### **Parameters**

| Name      | Туре        | Description                                                                                                                                                                                                                                             |
|-----------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| secretKey | string<[8]> | <ul> <li>Secret key used to calculate the hash value for user/host authentication</li> <li>Default value is "EPSONKEY".</li> <li>The secret key must be registered (default value changed) after installation or when replacing the printer.</li> </ul> |

## UpdateTime

Updates the German fiscal element (TSE) time

- **Updates the German fiscal element (TSE) time using the UTC time specified from POS**
- □ This function (or UpdateTimeForFirst) must be executed before starting to write transactions.

#### Role

Admin/TimeAdmin

#### Parameters

| Name        | Туре       | Description                                                                                                                                                                                                                                                                            |
|-------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| userld      | string<30> | Administrator logged in with Admin privileges<br>Or<br>Client ID logged in with TimeAdmin privileges                                                                                                                                                                                   |
| newDateTime | DateTime   | <ul> <li>Date and time specified from POS to synchronize</li> <li>German fiscal element (TSE) and POS date and time</li> <li>UTC specification</li> <li>Format is ISO 8601 extended format</li> <li>YYYY-MM-DDThh:mm:ssZ</li> <li>Only year 2000 and after are valid</li> </ul>        |
| useTimeSync | boolean    | <ul> <li>If German fiscal element (TSE) supports time synchronization, specify whether to use this function.</li> <li>true: use time synchronization</li> <li>false: do not use time synchronization</li> <li>Fixed to false if German fiscal element (TSE) model is "TSE1"</li> </ul> |

# UpdateTimeForFirst

Updates the German fiscal element (TSE) time

- Updates the German fiscal element (TSE) time using the UTC time specified from POS
  - Actually update the German fiscal element (TSE) time only when called the first time
  - Skip updating the German fiscal element (TSE) time when called the second and subsequent times per power-cycle
- □ This function (or UpdateTime) must be executed before starting to write transactions.

#### Role

Admin/TimeAdmin

#### **Parameters**

| Name        | Туре       | Description                                                                                                                                                                                                                                                                            |

# RegisterClient

Registers client IDs to be used in German fiscal element (TSE)

- □ 100 client IDs can be registered in German fiscal element (TSE).
- However, as one ID is used internally by the printer, 99 client IDs can be registered by the user.
- Only client IDs registered in German fiscal element (TSE) can be used for transactions.

#### Role

Admin

#### **Parameters**

| Name     | Туре       | Description                                                                                                                                                                                                                                                                                     |

| clientld | string<30> | <ul> <li>Client ID to be registered</li> <li>The string must be representable as an ASN.1<br/>PrintableString, which restricts the allowed<br/>characters to the following:<br/>A-Za-z0-9'()+,/:=? and the space character.</li> <li>As strings that include "EPSON" are reserved by</li> </ul> |
|          |            | the printer, registration by the user is prohib-<br>ited.                                                                                                                                                                                                                                       |

# DeregisterClient

Deregisters client IDs registered in German fiscal element (TSE)

#### Role

Admin

#### Parameters

| Name     | Туре       | Description                                                                                                                                                 |
|----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| clientld | string<30> | <ul><li>Client ID to be deregistered</li><li>As strings that include "EPSON" are reserved by<br/>the printer, deleting by the user is prohibited.</li></ul> |

# GetRegisteredClientList

Acquires a list of client IDs registered in German fiscal element (TSE)

□ Although the client ID "EPSONXXXXXXX" is included, the XXXXXXX part used inside the printer is the printer serial number.

#### Role

Admin

#### **Parameters**

| Name                   | Туре  | Description                                                                                                     |
|------------------------|-------|-----------------------------------------------------------------------------------------------------------------|
| registeredClientIdList | array | List of client IDs registered in German fiscal ele-<br>ment (TSE)<br>Example: {"registeredClientIdList":[POS1]} |

## UnlockTSE

Unlocks German fiscal element (TSE)

- □ Transactions and export functions are not available when German fiscal element (TSE) is locked. In fact, only functions belonging to User Authentication can be used.
- □ This setting is persisted across power cycles.

Role

## LockTSE

Locks German fiscal element (TSE)

- □ Transactions and export functions are not available when German fiscal element (TSE) is locked. In fact, only functions belonging to User Authentication can be used.
- □ This setting is persisted across power cycles.

Role

## SetTimeOutInterval

Sets the timeout period.

□ This setting is persisted across power cycles.

#### Role

Admin

#### Parameters

| Name                        | Туре   | Description                                                                      |
|-----------------------------|--------|----------------------------------------------------------------------------------|
| timeoutIntervalForAdmin     | number | Timeout period for Admin auto lockout                                            |

### **EnableExportIfCspTestFails**

Enables log data in German fiscal element (TSE) to be exported even if the CSP (Crypto Service Provider) test fails. \* The CSP test is executed in German fiscal element (TSE) self-test.

- □ If the CSP test fails due to a security module failure, log data cannot be exported by default.
- Only ArchiveExport can be executed with this command. (Filter-related exports cannot be executed.)
- □ This setting will only succeed after a successful German fiscal element (TSE) self-test (which includes the CSP test). Once the CSP test fails, this value cannot be changed anymore.
- □ This setting is persisted across power cycles.

#### Role

## DisableExportIfCspTestFails

Disables log data in German fiscal element (TSE) to be exported if the CSP (Crypto Service Provider) test fails.

- □ This setting will only succeed after a successful German fiscal element (TSE) self-test (which includes the CSP test). Once the CSP test fails, this value cannot be changed anymore.
- □ This setting is persisted across power cycles.

Role

# DisableSecureElement

Disables German fiscal element (TSE) use

- □ New transactions cannot be written after executing this function.
- **C**an be executed only when no incomplete transactions exist.

#### Role

# **User Authentication**

#### AuthenticateUserForAdmin

Log in to German fiscal element (TSE) with Admin privileges (user authentication)

- **D** Enables the use of functions whose "Role" is Admin (Admin privileges).
- Automatically log out when left (Admin privilege function not used) for a certain time (default 15 minutes).
   This timeout period can be set using SetTimeOutInterval.

#### Role

-

### AuthenticateUserForTimeAdmin

Log in to German fiscal element (TSE) with TimeAdmin privileges (user authentication)

- **D** Enables the use of functions whose "Role" is TimeAdmin (TimeAdmin privileges).
- Automatically log out when left (TimeAdmin privilege function not used) for a certain time (default 8 hours).
   This timeout period can be set using SetTimeOutInterval.

#### Role

-

#### Parameters

#### Input

| Name     | Туре          | Description                                                                                                                                                                                                                         |

# LogOutForAdmin

Logs out a user logged in with Admin privileges

Role

# LogOutForTimeAdmin

Logs out a client logged in with TimeAdmin privileges

#### Role

TimeAdmin

#### Parameters

| Name     | Туре       | Description                                   |
|----------|------------|-----------------------------------------------|
| clientId | string<30> | Client ID logged in with TimeAdmin privileges |

## UnblockUserForAdmin

Unblocks the PIN for Admin privileges

- □ This function is only available for hosts authenticated using AuthenticateHost.
- □ If PUK is blocked, it cannot be recovered. The only way to recover is to replace German fiscal element (TSE).

#### Role

Host authenticated using AuthenticateHost

#### **Parameters**

#### Input

| Name   | Туре        | Description                                                                                               |
|--------|-------------|-----------------------------------------------------------------------------------------------------------|
| userld | string<30>  | User ID of authenticated host                                                                             |
|        |             | Only "Administrator" is valid                                                                             |
| puk    | string<[6]> | PUK                                                                                                       |
| newPin | string<[5]> | <ul><li>PIN for Admin privileges</li><li>Only valid when PIN (new PIN) differs from current PIN</li></ul> |

| Name             | Туре   | Description                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# GetChallenge

#### Acquires the challenge

□ Acquires the challenge data used to calculate the hash value required for user/host authentication when logging in.

#### Role

#### Parameters

#### Input

| Name   | Туре       | Description                                                                                                                                                                                        |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| userld | string<30> | User ID or client ID of logged-in (authenticated)<br>host                                                                                                                                          |
|        |            | <ul> <li>The string must be representable as an ASN.1<br/>PrintableString, which restricts the allowed<br/>characters to the following:<br/>A-Za-z0-9'()+,/:=? and the space character.</li> </ul> |

| Name      | Туре         | Description                              |
|-----------|--------------|------------------------------------------|
| challenge | string<[16]> | Random string for each specified user ID |

## AuthenticateHost

#### Authenticates the host

□ This function (host authentication) must be executed before using the following functions.

- ChangePuk
- UnblockUserForAdmin
- UnblockUserForTimeAdmin

#### Role

\_

#### Parameters

| Name   | Туре          | Description                                                                           |
|--------|---------------|---------------------------------------------------------------------------------------|
| userld | string<30>    | User ID of host to be authenticated <ul> <li>Only "Administrator" is valid</li> </ul> |
| hash   | base64 string | Hash value for host authentication                                                    |

# DeauthenticateHost

Cancels host authentication.

□ Logs out of a host logged into (authenticated) with AuthenticateHost

#### Role

Host authenticated using AuthenticateHost

#### **Parameters**

| Name   | Туре       | Description                   |
|--------|------------|-------------------------------|
| userld | string<30> | User ID of authenticated host |
|        |            | Only "Administrator" is valid |

# GetAuthenticatedUserList

Acquires a list of logged-in (authenticated) user IDs and client IDs.

#### Role

Admin

#### Parameters

#### Input

| Name     | Туре       | Description                           |
|----------|------------|---------------------------------------|
| userRole | string<30> | Type of user privileges               |
|          |            | Only "Admin" or "TimeAdmin" are valid |

| Name                  | Туре  | Description                             |
|-----------------------|-------|-----------------------------------------|
| authenticatedUserList | array | List of logged-in user IDs              |
|                       |       | Example:                                |
|                       |       | {"authenticatedUserList":[POS1, POS2]}} |

### ChangePuk

**Changes PUK** 

- □ This function is only available for hosts authenticated using AuthenticateHost.
- □ If PUK is blocked, it cannot be recovered. The only way to recover is to replace German fiscal element (TSE).

#### Role

Host authenticated using AuthenticateHost

#### **Parameters**

#### Input

| Name   | Туре        | Description                                                    |
|--------|-------------|----------------------------------------------------------------|
| userld | string<30>  | User ID of authenticated host<br>Only "Administrator" is valid |
| oldPuk | string<[6]> | Current PUK                                                    |
| newPuk | string<[6]> | New PUK to be set                                              |

| Name             | Туре   | Description                                                                    |
|------------------|--------|--------------------------------------------------------------------------------|
| remainingRetries | number | Number of input PIN/PUK retries remaining                                      |
|                  |        | • PIN/PUK authentication can fail up to 3 times.                               |
|                  |        | <ul> <li>Not returned when PIN/PUK authentication is<br/>successful</li> </ul> |
|                  |        | <ul> <li>Reduces by 1 on each PIN/PUK authentication<br/>failure</li> </ul>    |
|                  |        | - Number of retries is reduced only when PIN/<br>PUK authentication fails.     |
|                  |        | - Number of retries is not reduced in other errors.                            |

# ChangePinForAdmin

Changes the Admin PIN

# Role

Admin

#### Parameters

## Input

| Name   | Туре        | Description            |
|--------|-------------|------------------------|
| oldPin | string<[5]> | Current AdminPIN       |
| newPin | string<[5]> | New AdminPIN to be set |

# **Export**

# ArchiveExport

Starts archive export

- D Acquires all log data saved in German fiscal element (TSE) in TAR file format
- □ After exporting starts, the printer enters export status and only the following commands can be accepted.
  - GetExportData
  - FinalizeExport
  - CancelExport
- □ Exporting cannot be restarted while in export status.
- Before starting exporting, the German fiscal element (TSE) time must be updated by executing UpdateTime or UpdateTimeForFirst.
- □ In export status, automatically log out when left (GetExportData not used) for a certain time (default 90 minutes).

This timeout period can be set using SetTimeOutInterval.

□ In the case of archive export, all log data can be deleted from German fiscal element (TSE) using FinalizeExport after confirming that all data has been acquired.

[Cautions during export]

- **D** The time required to export depends on the amount of data and the interface.
- Check that the smart device is charged sufficiently.
- □ Check that no errors have occurred in the printer.
- □ Check that the printer's communication status is in good condition while exporting.
- Do not turn off the printer while exporting.
- Do not disconnect the connection cable and power cable while exporting.
- Do not sleep the smart device while exporting.
- □ If data is not received properly while exporting due to an error such as disconnected communication, the exported data may be invalid, and CancelExport must be executed to start exporting again.

# GetExportData

#### Acquires exported data

- □ If exportStatus was not "EXPORT\_COMPLETE", acquisition of all log data is not complete and GetExportData must be executed again.
- □ If exportStatus was "EXPORT\_COMPLETE", acquisition of all log data is complete and it is not necessary to execute GetExportData again. Execute FinalizeExport.
- Each time data is acquired, it is Base64 decoded into binary data.
   All this binary data must be concatenated and saved as a single TAR file.

## Role

Admin

#### **Parameters**

| Name         | Туре          | Description                                                                                                                                                                                                                                                                                                                                                                   |

# FinalizeExport

Ends exporting

This can be executed only when all export target data has been acquired using GetExportData.

□ This procedure clears the export status.

□ If deleteData is set to true, all the log data in German fiscal element (TSE) is deleted.

#### Role

Admin

#### Parameters

| Name       | Туре    | Description                                                                                                                                                                                                                         |

# CancelExport

**Cancels** exporting

□ This procedure clears the export status.

## Role

Admin

# GetLogMessageCertificate

#### Acquires the public key for the signature

Acquires the certificate that can be used to verify the signatures of all Log Messages created by the German fiscal element (TSE).

- □ The returned data is a single PEM file, which contains multiple certificates, since the TSE's certificate is signed by other certificates.
- **D** To verify the signature, only the leaf certificate (the first one in the PEM file) is required.
- To make sure the leaf certificate is genuine, the next certificate in the file can be used to verify the previous certificate until the last certificate is about to be checked, which will be the root certificate that must be trusted by the system.

## Role

#### Parameters

| OTHER_ERROR_UNAUTHENTICATED_TIME_ADMIN_USER | A request was received from an unauthenticated (not logged-in) user with TimeAdmin privileges                                                        |
| OTHER_ERROR_UNAUTHENTICATED_ADMIN_USER      | A request was received from an unauthenticated (not logged-in) user with Admin privileges                                                            |
| OTHER_ERROR_UNAUTHENTICATED_USER            | A request was received from a user not authenticated with<br>Admin or TimeAdmin privileges                                                           |
| OTHER_ERROR_UNAUTHENTICATED_HOST            | A request was received from an unauthenticated (not logged-in) host                                                                                  |

| Error Code                                         | Condition                                                                                                                   |
|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| OTHER_ERROR_CURRENTLY_EXPORTING                    | Another request was received while in export status                                                                         |
| OTHER_ERROR_NO_EXPORT_STARTED                      | A request was received that can only be executed in export<br>status while not in export status (export not started)        |
| OTHER_ERROR_CURRENTLY_EXPORTING_USER               | The user ID who is currently exporting has logged out                                                                       |
| OTHER_ERROR_NO_TIME_SET_BEFORE_EXPORT              | German fiscal element (TSE) time was not updated before starting the export                                                 |
| OTHER_ERROR_ALREADY_ALL_DATA_EXPORTED              | An export data acquisition request was received when all export data had been acquired                                      |
| OTHER_ERROR_ALL_DATA_NOT_EXPORTED_YET              | An export end request was received when all export data had not been acquired                                               |
| OTHER_ERROR_TSE_ALREADY_SET_UP                     | Another set-up request was received for a German fiscal ele-<br>ment (TSE) that is already set-up                           |
| OTHER_ERROR_SECRETKEY_REGISTRATION_FAILED          | Failed to register the secret key                                                                                           |
| OTHER_ERROR_PARAMETER_MISMATCH                     | Incorrect parameters entered to specify the export range                                                                    |
| OTHER_ERROR_TOO_MANY_TIME_ADMIN_<br>USER_LOGGED_IN | The number of users (clients) logged in with TimeAdmin priv-<br>ileges exceeds the upper limit                              |
| OTHER_ERROR_TOO_MANY_CHALLENGE_REQUESTED           | The number of users requesting the challenge exceeds the upper limit                                                        |
| OTHER_ERROR_NO_MEMORY                              | Memory overflow error. This does not normally occur.                                                                        |
| OTHER_ERROR_FATAL                                  | Fatal error due to an unexpected event (mainly at the Ger-<br>man fiscal element (TSE) side). This does not normally occur. |

# From German fiscal element (TSE)

| Error Code                                 | Condition                                                                                                   |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| TSE1_ERROR_INVALID_PARAMETER               | Invalid input parameter.                                                                                    |
| TSE1_ERROR_NO_TSE                          | No German fiscal element (TSE) was found at the provided path.                                              |
| TSE1_ERROR_IO                              | No German fiscal element (TSE) detected (inserted) when a command request arrived                           |
|                                            | * When the printer accesses German fiscal element (TSE)                                                     |
|                                            | The operation timed out                                                                                     |
|                                            | A location was accessed that is outside the memory                                                          |
| TSE1_ERROR_INVALID_RESPONSE                | No correct response from German fiscal element (TSE)                                                        |
| TSE1_ERROR_STORE_FULL_INTERNAL             | German fiscal element (TSE) is internally full.                                                             |
| TSE1_ERROR_RESPONSE_MISSING                | This happens if two commands are sent at the same time or if a command is not allowed in the current state. |
| TSE1_ERROR_EXPORT_NOT_INITIALIZED          | German fiscal element (TSE) Store not initialized.                                                          |
| TSE1_ERROR_EXPORT_FAILED                   | Export Failed.                                                                                              |
| TSE1_ERROR_POWER_CYCLE_DETECTED            | A power cycle occurred during command execution.                                                            |
| TSE1_ERROR_FIRMWARE_UPDATE_NOT_APPLIED     | The firmware update was not properly applied.                                                               |
| TSE1_ERROR_FROM_TSE_FIRST                  | Lowest error code that might be raised from the German fis-<br>cal element (TSE).                           |
| TSE1_ERROR_UNKNOWN                         | Unspecified, internal processing error.                                                                     |
| TSE1_ERROR_NO_TIME_SET                     | Time not set.                                                                                               |
| TSE1_ERROR_NO_TRANSACTION_IN_PROGRESS      | No transaction in progress.                                                                                 |
| TSE1_ERROR_INVALID_CMD_SYNTAX              | Wrong command length.                                                                                       |
| TSE1_ERROR_NOT_ENOUGH_DATA_WRITTEN         | Not enough data written during transaction.                                                                 |
| TSE1_ERROR_TSE_INVALID_PARAMETER           | Invalid Parameter.                                                                                          |
| TSE1_ERROR_TRANSACTION_NOT_STARTED         | Given transaction is not started.                                                                           |
| TSE1_ERROR_MAX_PARALLEL_TRANSACTIONS       | Maximum parallel transactions reached.                                                                      |
| TSE1_ERROR_CERTIFICATE_EXPIRED             | Certificate expired.                                                                                        |
| TSE1_ERROR_NO_LAST_TRANSACTION             | No last transaction to fetch.                                                                               |
| TSE1_ERROR_CMD_NOT_ALLOWED                 | Command not allowed in current state.                                                                       |
| TSE1_ERROR_TRANSACTION_SIGNATURES_EXCEEDED | Signatures exceeded.                                                                                        |
| TSE1_ERROR_NOT_AUTHORIZED                  | Not authorized.                                                                                             |
| TSE1_ERROR_MAX_REGISTERED_CLIENTS_REACHED  | Maximum registered clients reached.                                                                         |
| TSE1_ERROR_CLIENT_NOT_REGISTERED           | Client not registered.                                                                                      |
| TSE1_ERROR_EXPORT_UNACKNOWLEDGED_DATA      | Failed to delete, data not completely exported.                                                             |

| Error Code                                    | Condition                                                                             |
|-----------------------------------------------|---------------------------------------------------------------------------------------|
| TSE1_ERROR_CLIENT_HAS_UNFINISHED_TRANSACTIONS | Failed to deregister, client has unfinished transactions.                             |
| TSE1_ERROR_TSE_HAS_UNFINISHED_TRANSACTIONS    | Failed to decommission, German fiscal element (TSE) has unfinished transactions.      |
| TSE1_ERROR_TSE_NO_RESPONSE_TO_FETCH           | Wrong state, there is no response to fetch.                                           |
| TSE1_ERROR_NOT_ALLOWED_EXPORT_IN_PROGRESS     | Wrong state, ongoing Filtered Export must be finished before this command is allowed. |
| TSE1_ERROR_STORE_FULL                         | Operation failed, not enough remaining capacity in German fiscal element (TSE) Store. |
| TSE1_ERROR_WRONG_STATE_NEEDS_PUK_CHANGE       | Wrong state, changed PUK required.                                                    |
| TSE1_ERROR_WRONG_STATE_NEEDS_PIN_CHANGE       | Wrong state, changed PIN required.                                                    |
| TSE1_ERROR_WRONG_STATE_NEEDS_TSE_UNLOCK       | Wrong state, unlocked German fiscal element (TSE) required.                           |
| TSE1_ERROR_WRONG_STATE_NEEDS_SELF_TEST        | Wrong state, self test must be run first.                                             |
| TSE1_ERROR_WRONG_STATE_NEEDS_SELF_TEST_PASSED | Wrong state, passed self test required.                                               |
| TSE1_ERROR_FWU_INTEGRITY_FAILURE              | Firmware Update: Integrity check failed.                                              |
| TSE1_ERROR_FWU_DECRYPTION_FAILURE             | Firmware Update: Decryption failed.                                                   |
| TSE1_ERROR_FWU_WRONG_FORMAT                   | Firmware Update: Wrong format.                                                        |
| TSE1_ERROR_FWU_INTERNAL_ERROR                 | Firmware Update: Internal error.                                                      |
| TSE1_ERROR_FWU_DOWNGRADE_PROHIBITED           | Firmware Update: downgrade prohibited.                                                |
| TSE1_ERROR_TSE_ALREADY_INITIALIZED            | German fiscal element (TSE) already initialized.                                      |
| TSE1_ERROR_TSE_DECOMMISSIONED                 | German fiscal element (TSE) decommissioned.                                           |
| TSE1_ERROR_TSE_NOT_INITIALIZED                | German fiscal element (TSE) not initialized.                                          |
| TSE1_ERROR_AUTHENTICATION_FAILED              | Authentication B90:C90failed.                                                         |
| TSE1_ERROR_AUTHENTICATION_PIN_BLOCKED         | PIN is blocked.                                                                       |
| TSE1_ERROR_AUTHENTICATION_USER_NOT_LOGGED_IN  | Given user is not authenticated.                                                      |
| TSE1_ERROR_SELF_TEST_FAILED_FW                | Self test of FW failed.                                                               |
| TSE1_ERROR_SELF_TEST_FAILED_CSP               | Self test of CSP failed.                                                              |
| TSE1_ERROR_SELF_TEST_FAILED_RNG               | Self test of RNG failed.                                                              |
| TSE1_ERROR_FWU_BASE_FW_ERROR                  | Firmware Update: Base FW update error.                                                |
| TSE1_ERROR_FWU_FWEXT_ERROR                    | Firmware Update: FW Extension update error.                                           |
| TSE1_ERROR_FWU_CSP_ERROR                      | Firmware Update: CSP update error.                                                    |
| TSE1_ERROR_EXPORT_NONE_IN_PROGRESS            | Filtered Export: no export in progress.                                               |
| TSE1_ERROR_EXPORT_RETRY                       | Filtered Export: no new data, keep polling.                                           |
| TSE1_ERROR_EXPORT_NO_DATA_AVAILABLE           | Filtered Export: no matching entries, export would be empty.                          |
| TSE1_ERROR_CMD_NOT_FOUND                      | Command not found                                                                     |
| TSE1_ERROR_SIG_ERROR                          | Signature creation error.                                                             |

| Error Code                 | Condition                                                                                                                                                                               |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TSE1_ERROR_FROM_TSE_LAST   | Highest error code that might be raised from the German fis-<br>cal element (TSE).                                                                                                      |
| TSE1_ERROR_RAISED_FROM_TSE | Errors that raised from the German fiscal element (TSE)<br>except for the above.<br>In the current version, it might be raised when the German<br>fiscal element (TSE) self test fails. |
